

Week 2 - AI: Guess the Text Prompts

Space for Teach Primary Logo

Read the paragraph and write what you would write an AI text prompt. Be as detailed as possible.

Dinosaurs were incredible ancient reptiles that roamed our planet millions of years ago. Here's what we know about them:

Dinosaurs first appeared around 230 million years ago during a period called the Middle to Late Triassic. Imagine a world where these magnificent creatures ruled the land, long before humans even existed!

Some of the first dinosaurs to be discovered were Megalosaurus, which means "big lizard" in Greek, Iguanodon and Hylaeosaurus.

Even though we can't observe living dinosaurs directly, paleontologists (those cool scientists who study ancient life) use various tools to uncover their secrets:

- **Fossils:** These are ancient remains like bones, teeth, footprints, and even skin impressions. They give us clues about dinosaur anatomy and behaviour.
- **Coprolites (Fossilised Poo):** Yes, you read that right! Dinosaur droppings tell us about their diets. Analysing coprolites reveals whether a dinosaur was a herbivore or a carnivore.
- **Eggs and Nests:** The arrangement of dinosaur eggs and nesting sites tells us about their egg-laying and parenting strategies.
- **Footprints:** Dinosaur footprints reveal their size, how they walked, and even their speed.

Write about the very first dinosaur, including when they existed, what were they called, and how scientists know about them.

The best use of AI in schools includes automating administrative tasks, personalised learning, auto Grading, pinpointing knowledge gaps and virtual tutoring.

AI can help learners by:

- **Adaptive Learning:** AI adapts content to each student's level, pace, and preferences. It ensures that learners receive personalized challenges and support, promoting deeper understanding and retention.
- **Immediate Feedback:** AI-powered assessments provide instant feedback, allowing students to correct mistakes promptly and learn from them.
- **Enhanced Engagement:** Interactive AI tools, gamified learning experiences, and virtual tutors make learning more engaging and enjoyable.
- **Accessibility:** AI can assist students with disabilities by providing alternative formats, speech-to-text features, and personalized accommodations.

Let your teacher know that you are using AI. Transparency is essential. When using AI tools for schoolwork, follow these guidelines: discuss with your teacher, name the AI Tools you used in your work, avoid cheating (AI should enhance learning, not replace it).

Remember, teachers play a vital role, and AI can never replace their expertise, care, and personal connections with students. Let's embrace AI as a powerful ally in education while respecting the unique role of educators!

What is the best use of AI in schools, how can it help learners, and should I let my teacher know when I am using it?

Week 2 - AI: Guess the Text Prompts - Part 2

Ice cream has a fascinating past, with origins that trace back to various cultures. Here are some key points:

- **Early Origins:** Some accounts suggest that ice cream-like treats existed in ancient Persia as far back as 550 BC. These early versions were made using ice houses and pools to serve concoctions similar to sorbets and faloodeh.
- **European Influence:** Ice cream spread across Europe via France. Italian cooks developed recipes for both water and milk ices.
- **Parisian Cafés:** In 1686, a Sicilian named Francesco Procopio opened a café in Paris, selling ices and sherbets. These icy delights became incredibly popular, leading to the emergence of many other ice makers in the city.
- **United States:** Ice cream was enjoyed by historical figures like George Washington, Thomas Jefferson, and Dolley Madison. Philadelphia became a hub for ice cream production, and the ice-cream soda was invented there in 1874.

Ice cream is a delightful frozen dessert made from a combination of ingredients, including: milk or cream, sweetener such as sugar, and flavorings like cocoa, vanilla, fruit, or other spices.

In the United Kingdom, as well as globally, certain ice cream flavors consistently steal the show. Here are the top three:

- **Vanilla:** A timeless classic loved for its simplicity and versatility.
- **Chocolate:** Rich, indulgent, and irresistible.
- **Strawberry:** Bursting with fruity goodness.

Tell me about the history of Ice Cream, what it is made of, and which are the three most popular flavours?

Once upon a moonlit night, in a cozy pet shop nestled between the stars, three unlikely companions hatched a daring plan. Goldie, the adventurous goldfish with shimmering scales, whispered to Hammy, the intrepid hamster with a penchant for tunnels, and Whiskers, the curious kitten with eyes like galaxies: "Let's escape this glass-bound life and explore the world beyond!"

And so, under the silvery glow of the moon, they embarked on their quest. Goldie swam through puddles, Hammy scurried along forgotten pipes, and Whiskers pounced on moonbeams. Together, they discovered enchanted forests, where fireflies danced to secret melodies, and meadows where dewdrops held whispered secrets.

Their journey led them to the Stardust Bridge, where wishes came true. Goldie wished for wings, Hammy dreamed of reaching the highest star, and Whiskers yearned for endless yarn balls. The bridge shimmered, granting their desires.

With newfound abilities, they soared across the night sky, leaving stardust trails behind. Goldie dipped her wings in constellations, Hammy rode comet tails, and Whiskers chased shooting stars. They laughed, their hearts lighter than moonbeams.

As dawn approached, they returned to their pet shop, their secret adventure etched in their hearts. Goldie settled back into her bowl, Hammy curled up in his cozy tunnel, and Whiskers nestled among yarn.

And so, every night, they'd gather by the window, sharing tales of their escapades—the goldfish, the hamster, and the kitten who danced among the stars. And that, is how the pet shop became a portal to magic, where dreams swam, scurried, and pounced together, forever weaving their celestial tale.

Write me a bedtime story about a goldfish, hamster and kitten that go on an adventure.

Week 2 - AI: The Answers!
